Quick and Easy Refrigeration Fix

Hi SCOTT,

Ready to save time and prevent unnecessary service calls? Here's the scoop: sometimes operators accidentally shut off the refrigeration at the Danfoss control, which can trigger a service call. But fear not! The solution is as simple as pushing and holding a button for a few seconds.

Wondering how to identify if the refrigeration has been turned off? Look out for the little blue dot on the screen:

To turn the refrigeration back on, all you need to do is press and hold the lightbulb button for a few seconds until the chiller turns back on, and voila! The refrigeration is up and running again.
