## Don't Forget to Clean Your Air Filter

Hi SCOTT,

Here is a friendly reminder about a quick and easy task that can make a massive difference in keeping your Crysalli chiller performing at its best. It's all about the air filter on the condensing unit!

Did you know that cleaning your air filter is crucial? We recommend checking it once a month, but in certain environments, it might need a bit more attention. Clear air filters mean better airflow, efficient operation, and that refreshing chill that keeps everyone smiling.

Worried about the hassle? Don't be! The cleaning process is a breeze! Simply remove the air filter and rinse it off in the sink. Let it dry out completely before popping it back on your Crysalli chiller.

We recommend keeping a backup air filter on hand, this way you can rotate them, ensuring a continuous and easy maintenance routine. When you pull off the dirty filter to clean and dry, just swap it with the fresh one.

Check out this helpful [YouTube video](#) that walks you through the entire air filter cleaning process. It's only 2 minutes of your time, but it'll make a world of difference! Check it out [here](#).

Remember, at Crysalli, we care about your customers and the environment. Regular air filter maintenance not only ensures impeccable performance but also helps reduce energy consumption, making it a win-win for you and the planet!

If you have any questions or need further assistance, don't hesitate to reach out. We're always here to help!
